Comment on accident in Jakarta from the president of Safety Committee EBAss

Dear Readers

Thankfully it is very rare for accidents to occur in the world of Hyperbaric treatment centres. However when accidents do occur there is the potential for them to be fatal with tragic loss of the lives of both patients and treatment staff.

Safety procedures are mandatory and use of certified technical solutions, equipment etc.

Please note that we will never assign blame our focus is solely on sharing information and investigation results in order for all to learn for the future.

But if any organisation or clinic would like our support in investigation procedures, risk analysis etc., we would be proud to offer our knowledge to help.

Sincerely Yours

Peter Kronlund,
President EBAss Safety
Committee 20162016-04-02
